ATM TestLab

Add-On Modules

Product Background

FIS™ solutions for ATM testing and configuration can easily be extended with our Add-On modules that add advanced capabilities to the base products. These modules enable you to create an even broader range of automated test scenarios which add value to any investment already made in FIS products, along with improvements in efficiency and integration with other testing systems.

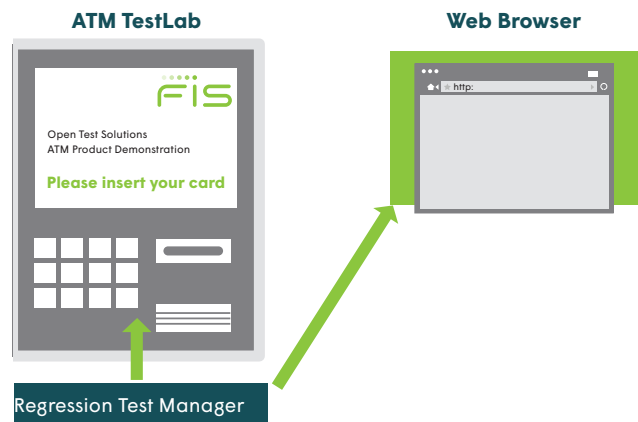

Browser Testing Add-On

Product Description

Automate test cases that span the ATM and the web browser. It allows you to control the web browser in order to navigate between pages and interact with content on the page, such as buttons, input fields and similar controls. Typical scenarios include:

- **Testing Video Teller ATMs**, where a remote bank operator uses a web interface to control the ATM
- **Automating host-side actions performed via a web browser**, for example, checking account balances or triggering configuration downloads
- **Integrating with third party systems** that use a web browser interface

The Browser Testing Add-On enables straightforward creation of end-to-end test cases that would otherwise be difficult to automate.

Features and Benefits

- **Integrate web browser testing with ATM testing:** allow a broader range of automated end-to-end test scenarios.
- **A single solution for ATM and web testing:** avoid multiple tools in the test environment.
- **Use the same QuickScript script language for ATM and web testing:** minimize cross training, users are productive from day one.

ATM TestLab
ATM Developer (with RTM)

ALM/Quality Center Add-On

Product Description

Allows an easy integration of FIS ATM solutions with HP's ALM (Quality Center). Using HP's recommended approach, a new test type is defined that allows you to associate tests in ALM with existing test cases in order to support enterprise-wide management and reporting of automated ATM testing.

Features and Benefits

- **Integrate automated ATM tests with your enterprise-wide test management system:** provides a single point of contact for reviewing all ATM automated tests alongside any manual tests that are being executed.
- **Launch tests remotely** from the HP ALM user interface and take advantage of the Quality Center's advanced scheduling options.
- **Results of test cases are automatically uploaded** to the Quality Center.

Rapid Test Generator Add-On

Product Description

Quickly create a broad range of automated ATM test cases. Speed up the creation of the bulk of automated test cases, and reap the benefits of automated ATM testing faster than ever before.

Leverage our extensive experience in creating fit-for-purpose, maintainable, automated tests, Rapid Test Generator promotes best-practices and allows you to automatically create test sets that are fully optimized for reuse and maintainability.

Features and Benefits

- Reduce time, effort and costs to create a broad automated test repository and realize Return On Investment sooner.
- Reduce your up-front design effort by supporting common test scenarios.
- Reduce your need for subject matter expertise by leveraging our ATM testing experience.
- Easily create tests that support automation best-practices.
- Ensure long-term test maintainability through application of sharing and parameterization.
