

Infrastructure Technology Outsourcing

Enterprise Hardware

Solutions

Your institution's hardware needs will always exist – and FIS Enterprise Hardware Solutions can help. Let FIS Enterprise Hardware Solutions alleviate the pressures of making hardware decisions, maintaining vendor relationships and keeping costs down.

Re-innovating hardware solutions

FROM LEGACY TO NEXT GEN

Your ideas and expertise drive your business. But no matter how innovative your ideas, how articulate your business strategy or how precise your expertise, running your business isn't possible without the latest hardware solutions and an optimized infrastructure environment that allows you to get maximum value from your software solutions. Outside the scope of daily operations, many financial institutions are challenged with not only understanding a wide range of available hardware solutions, but also selecting the best technology options for their unique needs. To compound this challenge, institutions typically need to maintain multiple vendor relationships. And, for businesses focused on the bottom line, cost controls can be as important in technology decisions as the hardware itself.

FIS for your current and future hardware needs – and your bottom line. At FIS, we're technology experts. And that's not just in reference to our innovative, industry-leading suite of end-to-end financial services and payments technology solutions – we're also the experts when it comes to the hardware applications on which many of our solutions run. We know the specs of the hardware our solutions require, and we can work with you not only to understand system requirements and your institution's needs, but also to deliver and install new equipment and provide service and support after the sale.

When it comes to price, FIS wraps your equipment with expertise, support and service – and still delivers it, in many cases, at a lower price than you could purchase on your own. That's because, as a \$5 billion global company – and the world's largest provider of financial services and payments technology – FIS has the purchasing power necessary to drive preferred reseller relationships with vendors, which ultimately means the best possible price for you.

For all your hardware needs both now and in the future, FIS Enterprise Hardware Solutions professionals can analyze your needs, and environment and determine the best, most cost-effective hardware for your organization.

High performance

SUPPORTING AN EFFICIENT WORKPLACE

Best-practice-oriented services

In addition to working with these vendors for hardware that meets your specific needs, FIS offers a variety of best-practice-oriented services

LAN Optimization

Business Continuity Services
