Advanced Portfolio Management & Trading

# INTRODUCTION

Managing money is at the core of a financial institution's business. From profitably investing its own fund balances on a day-to-day basis to underwriting bonds and holding customer assets in safekeeping, the lifeblood of the firm is tracking and investing funds to its best advantage. Yet, most institutions trade on one system and perform portfolio tracking on a completely different platform. Investment changes are entered after the fact, often in batch mode – an error-prone process that virtually ensures that day-to-day portfolio reports are out of sync with a firm's actual portfolio positions.

The future belongs to financial institutions that can thrive in an environment of increased competition and an accelerated pace of business. Managing their own investment portfolio to maximize performance can be a key competitive strategy. InTrader offers today's competitive financial services firms advanced portfolio management and trading capabilities, helping them realize improved investment performance while streamlining operations.

A web-based, fully integrated, straight-through system, InTrader goes far beyond simply tracking investments: It also includes trade processing and safekeeping functions, therefore addressing all investment management and reporting needs in a single system. Trades are automatically reflected throughout the system in real time, eliminating redundant entries and errors while providing an accurate, up-to-the-minute picture of an investment portfolio for optimal decision-making. Trades are entered just once; trade execution, accounting, collateralization, performance monitoring, reporting and more are handled automatically. Even regulatory reporting is as simple as a point-and-click command. InTrader features multi-level portfolio management and supports both your own portfolio as well as your correspondents. It also provides non-US dollar processing and generates regulatory compliance reports quickly and easily.

## KEY BENEFITS

- Offers a streamlined and comprehensive approach to bank treasury and portfolio management
- Addresses all investment management and reporting needs in a single system
- Provides real-time data and automatic analysis
- Helps optimize investment returns while streamlining operations
- Scalable, growing as your needs and business requirements change
- Offers the benefits of an open system

InTrader integrates with Portal for fast and secure electronic delivery of documents to authorized users at client firms as well as a dynamic view of portfolio analytics. The Portal includes dashboards which allow customers a graphical view of portfolios. InTrader's open architecture features ODBC-compliant access and multiple output formats. This open architecture also includes many Excel-based export functions, allowing customers to load data quickly and efficiently from trades to valuation. A leading system for integrated capital markets portfolio management, safekeeping, funding and trading, InTrader gives institutions new power to manage their own investments and provide improved service to clients and correspondent institutions.

# KEY FEATURES

## Paperless Trading and Funding

Transactions are entered through a web-based interface and automatically accounted for, cleared, settled and delivered to the custodian. To maximize productivity, InTrader lets traders and salespeople execute transactions with minimal data entry.
