

Infrastructure Technology Outsourcing

# Cloud Services

---

Organizations are looking to cloud computing to provide a more efficient, flexible and cost-effective model for computing—one that allows IT to operate much more efficiently and respond faster to business opportunities. The goal is to enable IT as a Service, and cloud computing provides the technical architecture to deliver it.

## Cloud Strategy at core

# TRANSITION TO A HYBRID CLOUD MODEL

In this age of rapid digitization, with agility being foremost, organizations are racing for a major upgrade by adopting cloud services in every possible facet. Cloud has time and again proved to be a fast and powerful means for enterprise to transform customer experiences, modernize their IT infrastructure, cost-effectively implement business and customer-facing applications and services.

We already know that the cloud is a powerful enabler of business transformation and innovation. Indeed, the question for many enterprises is not whether to shift to the cloud to realize its many benefits, but how to make the transition. The cloud ecosystem is complex, and the adoption journey can be difficult to navigate.

There is no single path to the cloud—no one-size-fits-all solution. Each path is context-driven, and choices abound for those looking to migrate. Organizations need to decide the service model, deployment options – Public, Private etc. There are additional considerations, including the need for data privacy and security for regulatory compliance. The type of workload (anything from ERP and CRM to social and mobile) being moved to the cloud is another significant variable.

To help businesses stay ahead, FIS offers integrated cloud services that leverage legacy systems through cloud consulting, implementation, migration and operations services. Many of our clients have embarked on innovative cloud programs that will give them the agility of cloud native companies.

FIS expert managed, functional and technical client services teams execute on FIS' three-pronged strategy: easy to implement or migrate, lower running costs and easy to consume. Our robust infrastructure and stringent focus on security and compliance enables us to guarantee seamless migration to cloud.

We're witnessing that clients are expanding to cloud-first strategies, as well as integrating their public and private clouds to gain a holistic view of their customer data. From that foundation, they are making meaning from data, sparking innovation and designing new customer experiences, and then delivering them seamlessly, anytime, anywhere.

No matter where you are in your cloud journey, FIS can help you think, design and deliver to realize all your possibilities.

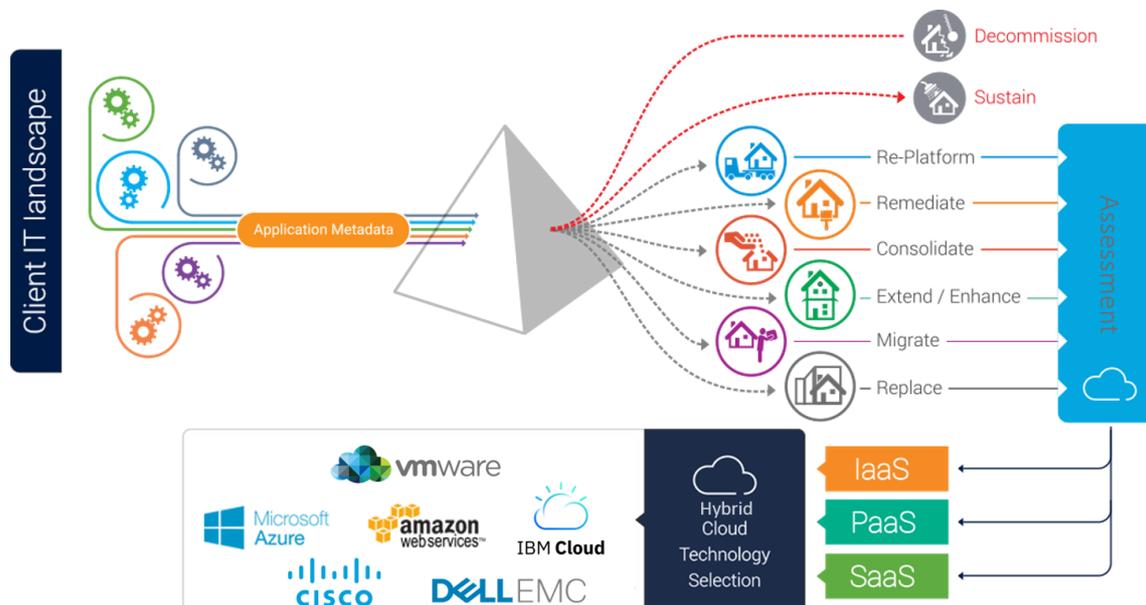

IDC expects spending on off-premises cloud IT infrastructure to grow at a five-year compound annual growth rate (CAGR) of 11.7%, reaching \$47.2 billion in 2021. With more than 85 percent of enterprises committing to multi cloud architectures “encompassing a mix of public cloud services, private clouds, community and hosted clouds.”

# Agility Flexibility Transparency

# SIMPLIFY YOUR JOURNEY TO THE CLOUD

FIS has a robust Cloud delivery framework, everything a global enterprise would expect for their Cloud native applications. It offers your organization an abundance of cloud-related skills and insights, assessments with migrations, covering all aspects of the transition to an environment in which Private and Public cloud services coexist. Our framework identifies the right Hybrid Cloud environment for your applications.

## Breadth of Solution Portfolio

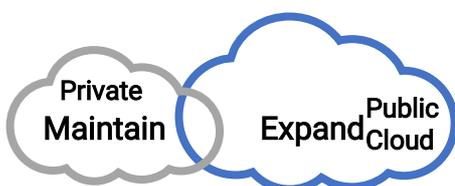

**Cloud Consulting and Assessment:** There are many cloud computing platforms and each one has many services which makes selecting the right one a tough call. This is where we come in, our consultants work closely with the clients to assess the technical suitability of the application for the cloud, suggest the right cloud platforms, define the cloud strategy and roadmap for the cloud transformation.

**Cloud Transformation & Migration:** We help you modernize and migrate applications, build new cloud-based applications, and transform your architecture and infrastructure while moving to a new technology operating model.

**Cloud Management and Optimization :** We enable you to off-load the responsibility of the day to day management & administration of your Cloud services to us. Our Managed Service models are designed with you in mind, giving you enhanced customer experience, reliable services and billing analytics.

## Broad Use Cases

### Maintain and expand

Geo expansion

Disaster recovery and backup

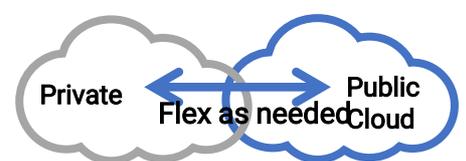

### Consolidate and migrate

Data center consolidation

Application migration

### Workload flexibility

Prod, dev, test, lab, and training

Burst capacity

# Enhance your Cloud capability WITH THE RIGHT PARTNER

## WHY FIS

**Seamless Implementation:** End-to-end oversight by VMware/AWS/Azure/IBM Cloud infrastructure Solution Architects and application experts, from migration to steady state during implementation, ensures risk free transition

**Meticulous Services:** FIS cloud delivery framework offers expert professional services and managed services teams that can execute on providing clients with easy implementation or migration paths including a standardized, streamlined, professionally managed project plan to help clients running with minimal disruption to their business. FIS provides a team of experts who manage the application assessments, integrations, ongoing operations and upgrades

**Reduce Total Cost of Ownership:** FIS provides its clients with all the benefits of moving to Hybrid Cloud, as they are increasingly becoming attractive due to their rapid-to-deploy and easy-to-use nature, combined with an attractive commercial model
