

Stay one step ahead of rising threats

Unlock a powerful defense against cyberattacks

Cybercriminals won't rest. Neither should you.

The threats posed by malicious actors are becoming more complex and their attacks more sophisticated. It's no surprise businesses are finding it hard to manage all the security solutions needed to repel them and stay compliant.

But internal security teams don't have to carry the whole burden. Partnering with a managed XDR provider can greatly enhance your security posture at a far lower cost, while providing holistic threat management across your entire technology stack.

The old ways don't cut it

The security approaches of the past were not built to cope with today's fast-moving threatscape. As the volume of cyberattacks and the number of potential vectors increases, more attacks are successful despite the presence of traditional security solutions.

66%

of cybersecurity professionals surveyed say their role is more stressful now than five years ago

The stakes are getting higher

Consumers are also becoming increasingly concerned with how businesses handle their personal data and how it can expose them to risk. Data breaches are reported widely and not only drive away potential new customers, but cause defection to competitors – highlighting the risks of failing to act.

241 days

Mean time organizations took to identify and contain a breach

Attacks aren't going away. So, businesses need a more holistic approach to managing their IT security. One of the key ways this can be done is through an Extended Detection & Response (XDR) solution that encompasses traditional endpoints and your entire network and cloud ecosystem.

61%

of security leaders reported suffering a breach due to failed or misconfigured controls over the past 12 months

How FIS can help

Our **FIS® Managed XDR service** offers maximum protection across your entire network with tools that rapidly detect, analyze, investigate and respond to threats with mitigation and containment protocols. Plus, our security operations center monitors and remains up to date with the ever-changing threat environment 24/7, 365 days a year – so you don't have to.

FIS Cyber Fusion Center

Gives you access to 24/7 security monitoring and response capabilities.

Cloud-Native SIEM Solution

Delivers intelligent security analytics and threat intelligence across the enterprise.

Cybersecurity Advisor

Offers a dedicated Cybersecurity Advisor as your team's point-of-contact for technical and day-to-day service delivery.

FIS Grade Security

Provides peace of mind by extending the same ironclad protection used to secure FIS systems to your business.

FIS Managed XDR: Our four security pillars

Prevent

Next-generation antivirus fully protects from malware-free and fileless attacks.

Detect

Managed threat hunting, alert monitoring, triage and protection.

Investigate

Advanced investigation support to identify risk areas.

Respond

Threat remediation through system isolation persistence elimination, artifact removal and policy tuning.

Ready to feel like your data security is back under control?

Money at rest. Money in motion. Money at work.™

Our **technology** powers the global economy across the money lifecycle.

Money at rest

Unlock seamless integration and human-centric digital experiences while ensuring efficiency, stability, and compliance as your business grows.

Money in motion

Unlock liquidity and flow of funds by synchronizing transactions, payment systems, and financial networks without compromising speed or security.

Money at work

Unlock a cohesive financial ecosystem and insights for strategic decisions to expand operations while optimizing performance.
