

The business challenges of climate risk

Unlock insight into your financial exposure

If you could see the short-, mid- and long-term impacts of extreme weather on your business, **what would you do differently?**

For companies around the world, asset damages and supply chain disruptions caused by extreme weather and climate change are increasingly seen as a major risk to corporate value chains; 2025 being a shining example with wildfires and flooding causing major disruptions. Companies and their investors are asking more questions about risk and resilience – and regulatory requirements are upping the stakes even further.

What do companies need to know?

The financial risks that extreme weather will have on their operations

Any opportunities that climate change may bring

The financial impact of climate change risks for regulatory reporting

What do investors need to know?

How companies are exposed to all risks, including physical climate risk

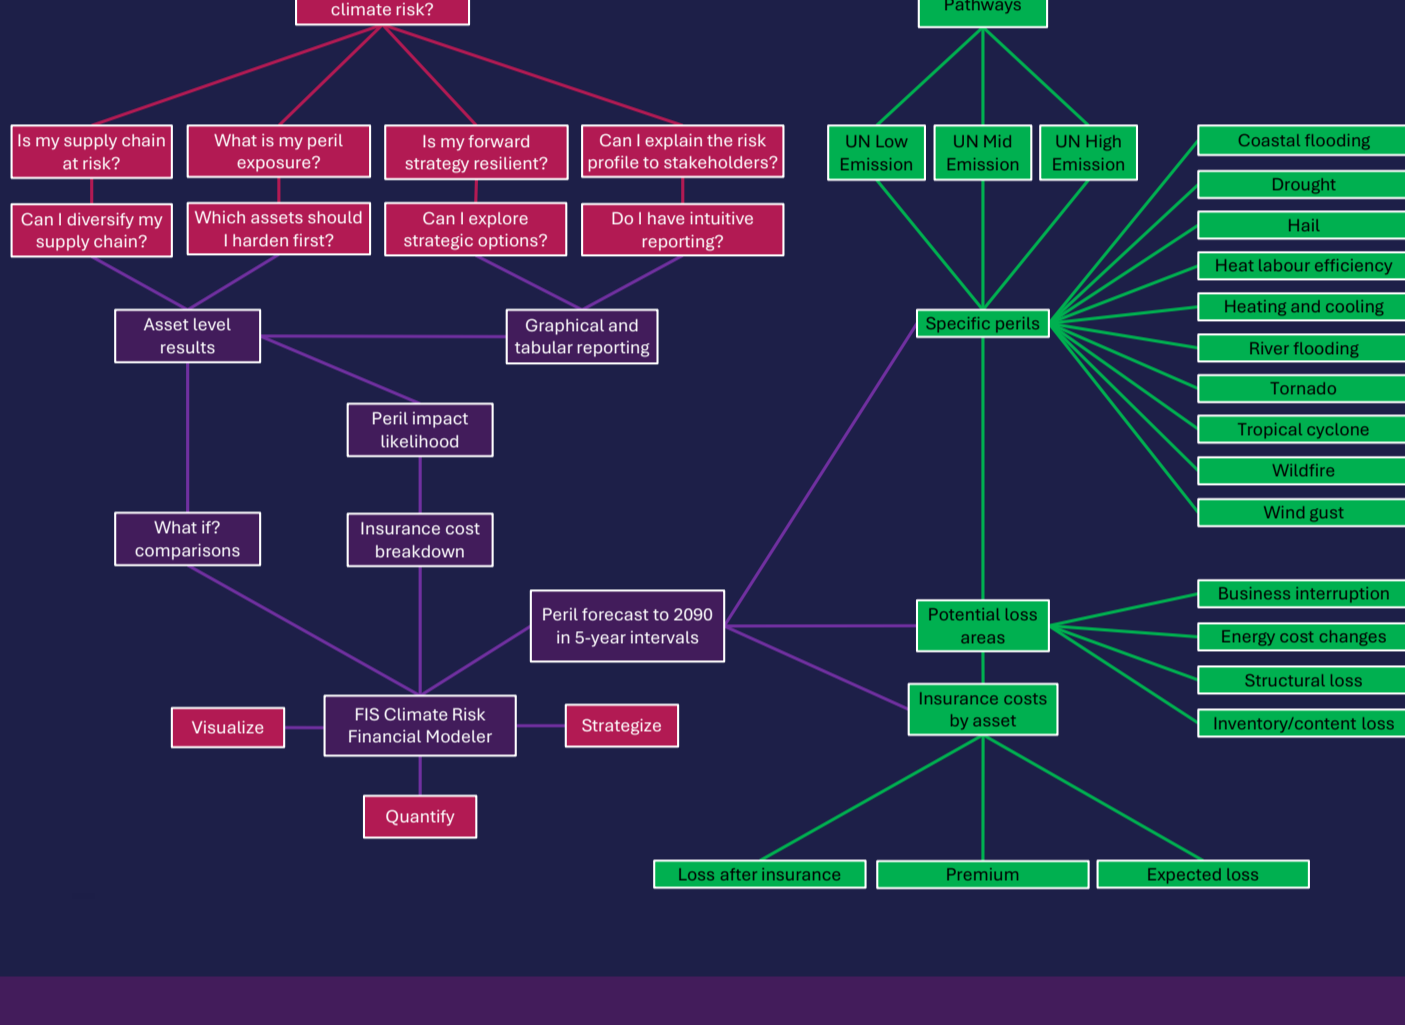

Companies' financial impact of exposure to physical climate change risk

Remember: modeling long-term climate risks and projecting 30+ years into the future is highly complex. Companies need an easy, repeatable and auditable way to project their financial exposure to climate risk so that they can manage their business and respond to regulation. They also need a reputable and reliable partner to support them in delivering those insights.

Finding the answers

There are many questions when it comes to financial risk. FIS® Climate Risk Financial Modeler unlocks the answers.

Whatever your industry, we can help you optimize investments, reduce losses and improve financial performance.

Retailer – North America

A retailer analyzed 2,300 retail locations across North America to assess climate risks like hurricanes, wildfires and flooding. With climate modeling, it could:

- Identify high-risk locations
- Adjust investment strategies to reinforce infrastructure, reducing expected losses
- Optimize store placement and supplier selection

Result: Cost savings and improved resilience

Retail – Multinational

A multinational retail firm needed to assess how climate change affects customer spending. With industry-specific climate forecasts, it was able to:

- Adjust product offerings and pricing strategies

Result: Stable revenue streams despite climate-related disruptions

Pharmaceutical

Pharmaceutical companies faced severe supply chain disruptions following Hurricane Maria in 2017, leading to shortages of critical medications. Companies with climate risk modeling could:

- Diversify production sites
- Avoid significant supply chain disruption

Result: Business continuity and limited financial losses

Manufacturing

A global producer of pulp and solid wood products wanted to assess risks to its forest-based supply chain. After running a scenario analysis and integrating climate risk modeling, it could:

- Address newly-found vulnerabilities to wildfires and extreme weather events
- Secure sustainable raw material sourcing

Result: Greater operational efficiency and a solid plan for long-term resilience

With Climate Risk Financial Modeler, you can understand the financial impact of climate risk on your business and make your money work harder for you.

Prepare your business for the future – today.
