

# EMV CHIP CARD PLUG-IN

Simplify EMV instant issuance

The Chip Card Plug-In is a software service developed by FIS™ that allows your financial institution to securely connect an in-house Instant Issuance software application to FIS for full management of chip data preparation and chip personalization. By leveraging the FIS EMV infrastructure that currently supports millions of cards, and thousands of EMV programs, the Chip Card Plug-In reduces your institutions role in managing critical EMV elements that are now required in an EMV instant issue environment. FIS simplifies EMV instant issuance resulting in expense reduction and operational efficiency.

## Benefits of the FIS Chip Card Plug-In Solution

Chip Profile	Key Management	Chip Enablement	EMV Scripts	Chip Expiration
 <p>Don't reinvent, replicate - Leverage your central fulfillment chip configuration and data for your instant issue environment</p> <p><b>Reduce risk, expense, and time</b></p>	 <p>Manage keys exactly the same way as central issuance, and move CVV/PIN calculations to FIS' HSM infrastructure</p> <p><b>Maximize security of card data and efficiency</b></p>	 <p>Eliminate the need to engage in additional key management activities to personalize your cards</p> <p><b>Use the same plastic cardstock in-branch or centrally</b></p>	 <p>FIS will manage the script that allows our software to write to your chip</p> <p><b>Reduce costs by not purchasing separate scripts</b></p>	 <p>FIS will facilitate the migration from expiring chips to the latest technology that is released by the payment brands</p> <p><b>Ensuring a successful program now and into the future</b></p>
