

Treasury and Risk Manager - Quantum SaaS Edition

Unlock advanced treasury and risk capabilities with SaaS agility

At the nerve center of the organization, the office of the CFO (oCFO) is under increasing pressure from rising capital costs, volatile markets and rapid innovation in payments. With accountability for liquidity, capital efficiency, returns and the cost of risk management, CFOs and treasury leaders play a critical role in ensuring the business can move money securely, efficiently and at scale.

Today, that responsibility is expanding. CFOs and treasurers must navigate heightened regulatory scrutiny, deliver real-time visibility across complex global operations and support growth without adding operational drag. Incremental change is no longer enough. oCFO leaders – alongside IT and finance partners – are seeking modern SaaS treasury solutions that provide enterprise-grade visibility, control and agility, while reducing long-term maintenance costs and avoiding the disruption of legacy systems.

The goal is clear: empower teams to respond faster, manage risk with confidence and steer financial outcomes with clarity.

The best of both worlds

FIS® Treasury and Risk Manager - Quantum SaaS Edition is the enterprise treasury and risk platform designed for this moment. It delivers advanced capabilities for organizations operating at scale, providing the depth needed to handle today's complex global risk management, hedging and accounting requirements. It addresses the trade-off between deep functionality and SaaS simplicity, giving organizations the best of both worlds.

Quantum SaaS turns treasury complexity into financial readiness, giving you the confidence to anticipate risk, activate strategy and execute with control. By orchestrating your treasury operations, you can help ensure your money is effective whether it's at rest, in motion or at work. The solution's SaaS architecture allows you to replace legacy systems, simplify change and move faster without compromising on governance, security or functional depth.

Benefits

Reduce operational and transformation risk

Move away from fragile, high-maintenance legacy platforms that create business risk. Quantum SaaS reduces your total cost of ownership by eliminating disruptive, costly upgrades and minimizing reliance on external consultants. This allows your team to focus on strategic activities, not system maintenance.

Manage complex financial risk with confidence

Navigate market volatility with sophisticated tools for risk management, hedging and accounting. The platform's deep functionality helps you precisely measure and mitigate market, credit and operational risks. You can develop more effective strategies to protect your P&L and easily generate the financial reports needed for compliance.

Simplify change and accelerate time to value

Leverage a modern, next-gen SaaS model that simplifies implementation and maintenance. Quantum SaaS allows your treasury systems to adapt to regulatory, business and ERP changes without recurring complexity or manual workarounds. This agility helps ensure you can respond quickly to an evolving business environment and achieve results faster.

Operate on an enterprise-grade secure platform

Protect your organization in an environment of growing cyberthreats. Quantum SaaS is built on a foundation of enterprise-grade security and governance. You can operate with confidence, knowing your critical treasury operations and data are protected by an infrastructure designed for demanding financial institutions.

Quantum SaaS is ideal for:

- Large multinational corporations that run multiple legacy treasury and risk management systems and seek to reduce their total cost of ownership for technology.
- Smaller organizations with a mindset of best-of-class, benchmarking themselves with the Global Fortune 1000. Cost is secondary compared to “best-in-class mindset.”
- Smaller organizations who are looking to solve an isolated business challenge such as FX, IR or commodity hedging, hedge accounting or in-house-banking whereby these business challenges are characterized by high volumes, complexity or absolutely critical to their business operations.

If that sounds like your firm, or you’re simply looking to upgrade your treasury technology, contact us.
