Scaling trust in a complex financial world

Unlock accelerated growth while meeting rising compliance, resilience and innovation demands

The new mandate for financial services

Rising expectations

Financial institutions are under pressure to grow faster, enter new markets and deliver seamless customer experiences while navigating increasingly complex regulatory requirements. At the same time, they must maintain uninterrupted operations and protect highly sensitive data.

Scale and compliance can't compete

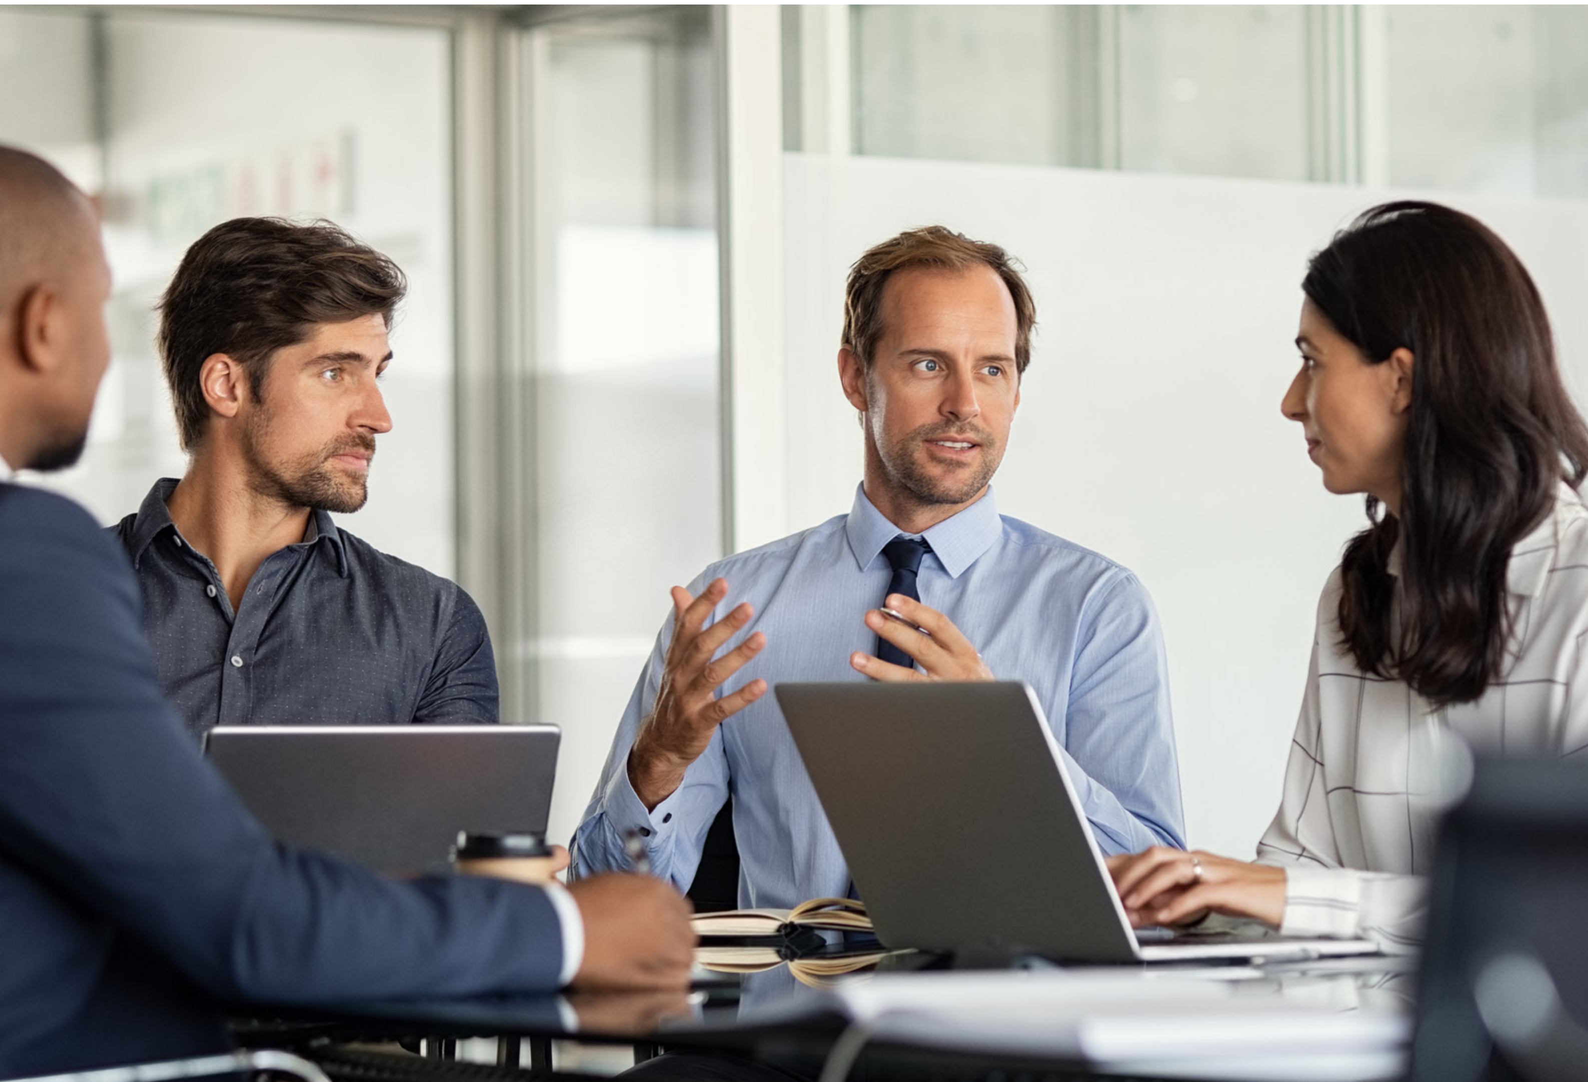
Historically, organizations have faced tradeoffs between innovation, compliance and operational resilience. Today, those tradeoffs are no longer acceptable. Financial institutions need technology ecosystems that help them expand globally, adapt quickly and remain compliant without adding complexity or risk.

The ability to combine growth, governance and operational excellence has become a key differentiator in a rapidly evolving marketplace.

Global compliance pressure

Complexity is increasing

Financial solutions may need to align with 12–25 regulatory regimes.



A foundation built for confidence

The power of partnership

Success in financial services requires more than technology. It demands deep industry expertise paired with a secure, scalable infrastructure foundation. Organizations increasingly rely on strategic partnerships that bring together world-class cloud capabilities and specialized financial services knowledge.

Shared responsibility drives outcomes

A shared responsibility model helps organizations accelerate deployment, strengthen governance and improve operational consistency. By combining cloud infrastructure with industry-specific software and intelligence, financial institutions can move faster while maintaining the controls required for highly regulated environments.

The result is a stronger foundation for growth, reliability and customer trust.

Expanding globally without disruption

Removing barriers to growth

Expanding into new regions has traditionally required significant investments in infrastructure, operations and compliance. Modern cloud-enabled operating models are changing that equation.

Scaling becomes repeatable

With standardized deployment frameworks, infrastructure as code and consistent security controls, organizations can extend operations into new markets more efficiently. Rather than rebuilding capabilities for every geography, institutions can replicate proven models while maintaining governance and operational consistency.

This approach accelerates time to market, reduces risk and helps organizations pursue new opportunities with greater confidence.

Expansion without fragmentation

Deploying into new regions becomes a configuration decision rather than a large-scale infrastructure project, enabling faster market entry and operational consistency.

"We have a shared responsibility to deliver scalability, reliability and orchestrated intelligence with built-in compliance and governance. In the world of financial systems, you have to get it right the first time, every single time."

MaryKay Evans
Global Go-to-Market Strategy, FIS

Innovation with resilience at the core

Future-ready financial systems

As AI, automation and advanced analytics become integral to financial services, institutions need a framework that supports innovation without compromising stability or compliance.

Resilience by design

The most successful organizations build resilience into the architecture from the start. Reliability, scalability and security are treated as foundational requirements rather than afterthoughts. This approach enables institutions to adopt emerging technologies while maintaining the performance and trust customers expect.

Organizations that embed resilience into their innovation strategy are better positioned to compete, adapt and lead in the years ahead.

Resilience can be added after deployment

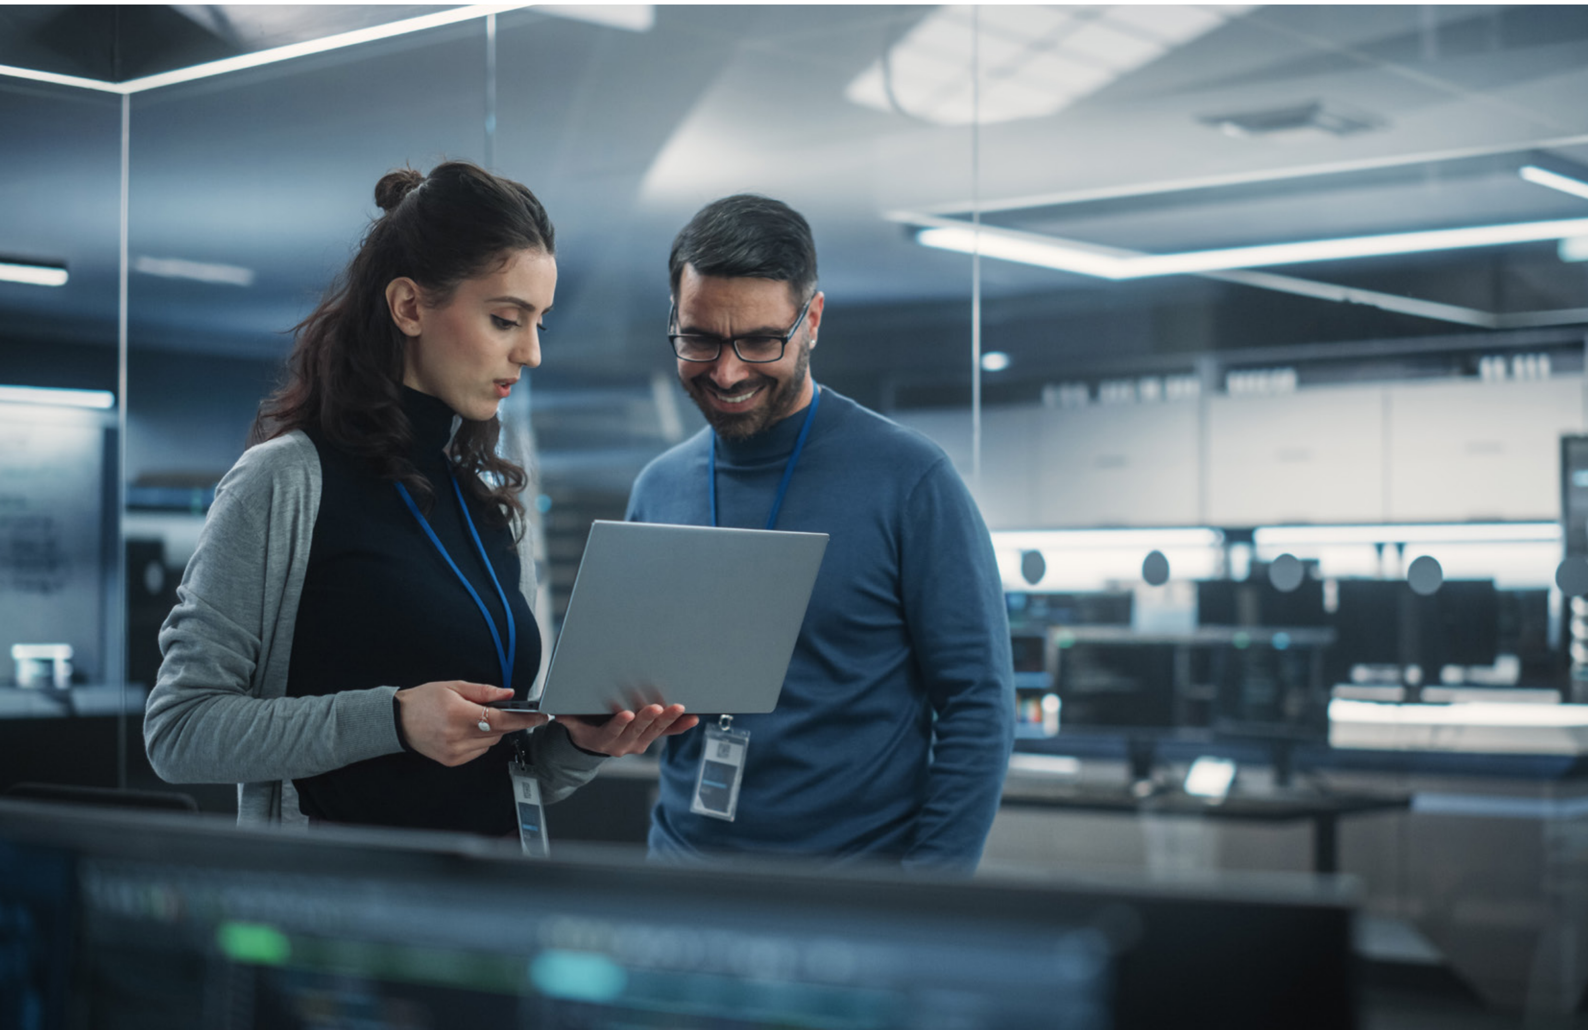
In financial services, resilience must be designed into systems from the beginning to support continuous operations and customer trust.

Growth and trust can coexist

Financial institutions no longer need to choose between innovation, compliance and resilience. By combining scalable cloud infrastructure with deep financial services expertise, organizations can expand globally, adapt to changing regulations and adopt emerging technologies with confidence. The leaders of tomorrow will be those that build trust, resilience and innovation into every stage of their growth strategy.

Built to scale trust

Contact us



Money at rest. Money in motion. Money at work.™

Our technology powers the global economy across the money lifecycle.

Money at rest

Unlock seamless integration and human-centric digital experiences while ensuring efficiency, stability, and compliance as your business grows.

Money in motion

Unlock liquidity and flow of funds by synchronizing transactions, payment systems, and financial networks without compromising speed or security.

Money at work

Unlock a cohesive financial ecosystem and insights for strategic decisions to expand operations while optimizing performance.

About FIS

FIS is a financial technology company providing solutions to financial institutions, businesses. We unlock financial technology that underpins the world's financial system. Our people are dedicated to advancing the way the world pays, banks and invests, by helping our clients confidently run, grow and protect their businesses. Our expertise comes from decades of experience helping financial institutions and businesses adapt to meet the needs of their customers by harnessing the power that comes when reliability meets innovation in financial technology. Headquartered in Jacksonville, Florida, FIS is a member of the Fortune 500® and the Standard & Poor's 500® Index. To learn more, visit FISGLOBAL.COM. Follow FIS on LinkedIn, Facebook and X (@FISglobal).
