

EMPOWERING  
A DIGITAL TREASURY

# Modernizing Treasury in the Cloud

---

...with FIS' Quantum Treasury  
Management Solution

Corporate treasury is migrating to cloud solutions. Making that transition with FIS' Quantum treasury management solution opens up a world of additional possible benefits.

**Are you ready? Talk with FIS Today.**

## **We've Got You Covered.**

From the flexibility and breadth of the functionality to the "Built for Enterprise" private cloud architecture, our "Secure by Design" infrastructure, and "Easy to Consume" Managed Services Catalogue, FIS' Quantum solution can help you effectively and efficiently manage all of your treasury and risk management operations.

## **Let Us Show You How...**

# Why FIS' Quantum Solution...in the Cloud?

FIS' Quantum treasury management solution enables treasury customers to not only meet their requirements but focus their staff on strategic initiatives without having to manage and maintain systems.

Our expert managed, functional and technical client services teams execute on FIS' three-pronged strategy: Easy to Implement or Migrate, Lower Running Costs and Easy to Consume. They help get and keep treasury up and running with minimal disruption to their business.

## 1. Easy to Implement or Migrate

---

Quantum features implementation and migration packages that focus on minimizing disruption to your business. Implementation and migration includes turnkey deployments to make sure that all the IT infrastructure is as ready as soon as the implementation or migration project starts. This helps minimize project risk, and ensures there are no IT headaches for your internal teams.

## 2. Lower Running Costs

---

With Quantum in the cloud, the lack of upfront hardware and software investment lowers overall IT and infrastructure costs. FIS serves as a single point of contact for all IT support and application management, eliminating the need to have IT staff supporting the solution.

## 3. Easy to Consume

---

Quantum comes with a full range of Managed Services which provide enhanced levels of business operations support and ongoing platform management so that your internal teams can always focus on using the system, not managing it. Whether it's guaranteeing application availability, ensuring that integrations and key business processes have been executed successfully throughout the global business day, providing level 1 support to a global user base, or managing product upgrades in a turnkey model - all can be delivered by FIS' Managed Services catalogue as part of your monthly fee.

# Why FIS' Quantum Solution...in the Cloud?

*continued*

Plus you benefit from these additional and unique benefits by utilizing FIS' Quantum solution:

## 4. Built for Enterprise

FIS' Private Cloud service delivers everything a global enterprise expects for a mission critical financial technology platform. Rapid setup with automated provisioning, extensive data isolation with our Private Cloud design, high-performance data throughput with end-to-end solid-state storage, and full stack fault tolerance with our high-availability SLA.

## 5. The Latest in Cloud Technology

FIS' latest Quantum Six version uses HTML5 with responsive web design and SAML 2.0 to ensure you can easily navigate and access your data securely over the internet no matter what device you are using, including mobile platforms.

## 6. Secure by Design

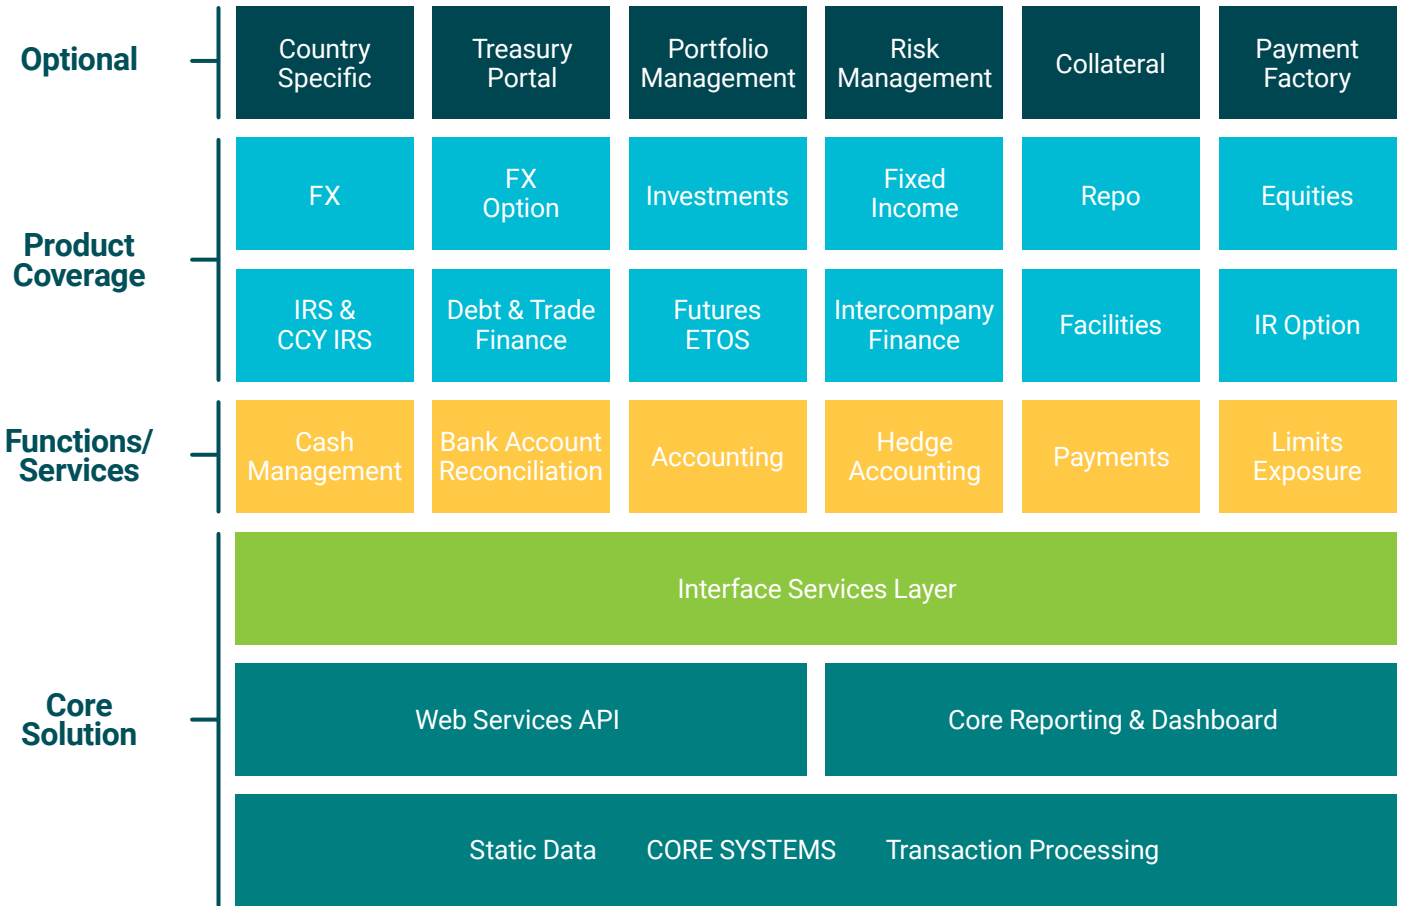

With our "Secure by Design" infrastructure, FIS is committed to helping protect our clients' investment, data and entire treasury operation. FIS also partners with leading industry and key governmental security and enforcement agencies to capture, analyze and assess threat intelligence, helping defend ourselves and our clients from cyberattacks.

And last but certainly not least ...

## 7. Functional Coverage

Our dedication to the full spectrum of treasury business requirements, from bank connectivity to cash management to risk management, coupled with our ability to easily interface with peripheral systems and a full feature Web Service API, translates to a much more seamless, simple implementation, with a single vendor.

# Functional Coverage

# We Hear You.

## What are the practical benefits of moving my treasury to the cloud?

**Seamless Integration** – Only FIS’ delivers an integrated support process where application functional, technical, and cloud infrastructure teams all work together and use the same service management toolset for incidents, changes, and other tickets, enabling consolidated response and resolution time SLA reporting.

**Hyper-focus on Security** – With our “Secure by Design” infrastructure, FIS is committed to helping protect our clients’ investment, data, and entire treasury operation. Our customers benefit from our unique economies of scale and investments in financial data security and solution architecture that includes highly segregated data environments for each customer, and a RISC team of over 250 IT security professionals drawn from all over the financial industry and tasked with protecting our customer data. FIS also partners with leading industry and key governmental security and enforcement agencies to capture, analyze and assess threat intelligence to help defend ourselves and our clients from cyberattacks.

**White-glove Service** – A cloud solution should offer end-to-end professional, managed and client services wrapped around it for a single point of contact. The vendor should have expert professional services and managed services teams that can execute on providing clients with easy implementation or migration paths including a standardized, streamlined, professionally managed project plan to help get corporate treasury up and running with minimal disruption to their business. The vendor should provide a team of experts who manage the integrations, ongoing operations and upgrades, reducing IT overhead.

**Application-based SLAs** – FIS’ Cloud Service is backed with SLAs that focus on more than infrastructure, they focus on application availability and operational health. No other cloud service available for FIS applications provides assurance up to and including the application.

**Lower Operating Costs** – Private cloud environments are increasingly becoming attractive due to their rapid-to-deploy and easy-to-use nature, combined with an attractive commercial model that doesn’t require any upfront hardware or software investment and lower overall operating costs. Hosting Quantum in the cloud combined with FIS’ suite of managed services offers customers lower running costs which means predictable, low-risk operating costs.

## I already have an installed treasury management system, but it is underutilized and/or no longer meets my needs.

It may be time for you to reevaluate not just your treasury technology environment, but your treasury requirements as well. FIS can help you evaluate the gaps within your current treasury technology, and can benchmark your current treasury practices to industry best practices. A gap analysis of your treasury department will help you to understand what technology is needed to transform you into a best-in-class treasury department.

## We have a real need, but no budget for a treasury management system.

FIS can give your team the tools needed to develop a business case for a treasury management system. Private cloud environments are increasingly becoming attractive due to their rapid-to-deploy and easy-to-use nature, combined with an attractive commercial model that doesn’t require any upfront hardware or software investment and lower overall operating costs. Hosting Quantum in the cloud and leveraging FIS’ suite of managed services offers customers lower running costs which means predictable, low-risk operating costs.
