

FIS managed services make the move to the FIS Cleared Derivatives solution easier

Access to next generation FIS technology

All FIS managed services and software clients will have full access to the valuable new features and functionality in the FIS Cleared Derivatives technology platform.

Foundational FIS migration support

We've made investments in core migration support for all clients, including migration automation tools, project templates and trained professional services teams.

Upgrade projects provided "as a service"

As part of our newly enhanced managed services, FIS takes on the commitment and responsibility to successfully deliver the FIS CD migration project for clients.

Reduced migration complexity

Our "upgrade as a service" offering also leverages standard FIS technology, processes and configurations to create the simplest, most predictable migration experience.

Minimized operational impact

In our operations managed services offering, FIS takes on the responsibility for most operational migration tasks to deliver even further reductions in clients' migration effort, risk and cost.

Clients who choose the FIS-managed upgrade path get faster, easier access to the business benefits of our next generation technology instead of focusing on the journey to get there!
